

## your practise

### Implementing the system

- Quick and easy for you to implement – the system has been over two years in the making and is now live.
- It can easily be adapted and configured for your college or organisation, incorporating your corporate identity, system for assessment, exam questions and administrative processes.
- Choosing Practique mitigates your risks. A robust secure system that has been extensively tested means that the risk of failure, overspend or late delivery is alleviated.
- Value for money – readily available, so much more cost-effective for you than commissioning and developing a new system from scratch.

### Training and support

- Practique is a specialised product. A dedicated Fry team will install and configure the system so that it meets your needs.
- Customer focus is at the heart of Fry. We will make sure we truly understand your exam system and processes so that the functionality meets your requirements. Our team will also help you extensively trial the system in your clinical facility and ensure staff are fully trained.
- Fry is dedicated to ensuring that Practique remains an outstanding, world-class system for managing, examining and marking clinical assessments. The team is committed to continually improving the system.
- Ongoing upgrades and support will guarantee that your examination process remains up to date and stress free.

## discover practise

Practique has been chosen by several organisations.

 **practique**  
your exams, your results • you're in control

Practique, an **automated end-to-end exam management software** for Universities, Training and Professional bodies which includes: **blueprinting, question bank, question authoring, online marking, examiner and examinee scheduling, real time mark collection, standard setting** all with sophisticated **reporting** and **feedback**

made with love and care by  
[www.fry-it.com](http://www.fry-it.com)

# what does pratique do

**Blueprinting.** A flexible system that enables questions to be categorised against your curriculum, domains of competence or learning outcomes. Exam blueprints capture the distributions of questions/stations to be used when creating exam-papers or station-sets.

**Question bank.** The information stored about each question or station is customisable, to enable existing question banks to be imported easily. Questions can be sorted and filtered and question performance in previous exams can be examined.

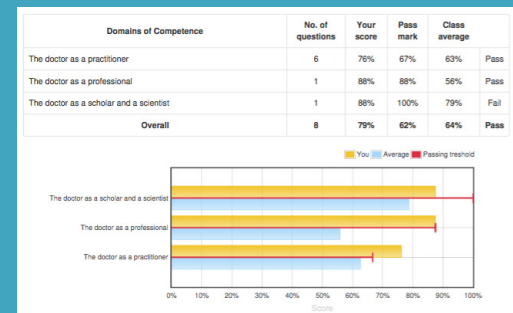

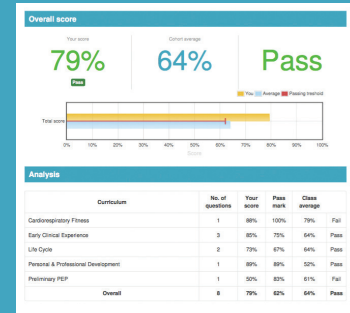

Practique currently supports Single-Best-Answer, Short-Answer-Questions, and OSCE/OSPE stations.

**Exam delivery.** The exam can be pushed to the iPads from the server in a few minutes. The native-iPad app stores answers/marks locally as well as sending them to the server, allowing the exam to continue whether all the devices are online or not.

**Marking.** Single-Best-Answer can be marked automatically, and Practique provides innovative per-question marking for Short-Answer-Questions, which allows alternative answers to be automatically marked, reviewed and unexpected alternatives accepted or rejected allowing hundreds of answers to be marked in a few seconds.

**Standard setting.** Results are processed using Angoff, Borderline Group, or Borderline Regression standard setting with the Standard-Error-of-Measurement used to generate a single-sided confidence interval where the level of confidence is adjustable.

**Reports.** We have incorporated several standard reports into Practique for candidate feedback, candidate history, examiner consistency, examiner history, question/station performance.

## Instant results - Your results straight away wherever you are

- Marks are collated instantly and standard setting can start.
- All the statistics are generated automatically and analysis can be carried out in a fraction of the time.

## Error-free - To err is human that's why we automated it

- Incomplete marks are a thing of the past
- Zero-chance of transcription or transfer errors
- No scanning errors - no scanners or special forms are needed!

## Free up your time: Practique does the leg work for you

- Everything is organised for you. Practique has an intuitive workflow to speed through the whole exam management lifecycle.
- Seating and rooms are automatically allocated, questions and scenarios are automatically generated, examiners can use the built-in booking facility

## Save money and the planet!: no more paper, easy admin

- No paper means saving on printing special forms, distribution, collection and scanning costs.
- Practique should pay for itself in less than a year in much reduced administration costs and leaving administrators and faculty free for their other duties.

## Nothing gets lost: Results are important Practique keeps them safe

- All your questions, marks, reports and historical performance are all in one place for all to use
- For high-stakes exams like OSCE's all marks from all ipads are backed up to each other so there is no chance of losing any results

## Report and analyse: Helping you improve the quality of your assessments

- All the most commonly used (and many not so commonly used) exam statistics are available at the touch of a button - it's almost like having your own statistics department!
- Marks arrive in real time and can be seen alongside all historical marks so that you can quickly analyse performance and areas for improvement

## Integrate and interrogate: it's your data

- Go deeper with database linking so that you can analyse and extract data for all historical and current exams stored in your own data repository.
- Access the data with statistics packages such as SAS, R, SPSS and Excel.

## Safe and secure: peace of mind that your data is protected

- Exams and transfers between devices and server are encrypted
- Data is backed up in real-time to multiple servers and devices
